Impacts from Spent Lead Ammunition on Animals

- An estimated 10 million to 20 million birds and other animals die each year from lead poisoning in the United States.
  

- Lead exposure can cause organ failure and brain damage in animals, causing blindness, paralysis of the lungs and intestinal tract, seizure, and death.
  

- Animals consume spent ammunition while eating wounded or dead prey or while scavenging contaminated remains left behind by hunters.
  
  Lead Bullet Risks for Wildlife & Humans, National Park Service (Sept. 24, 2019)
